

# STOP!

**spot the signs  
of gut stasis**

**S** **Slowed  
or absent  
faecal output**

Is your rabbit producing their normal number of faecal droppings. Has this reduced or stopped completely? Are these droppings smaller in size?

**T** **Tense  
abdomen, pain  
or bloating**

Is your rabbit allowing you to touch them, is their stomach bloated or tense. When you touch their abdomen do they react as if they are pained?

**O** **Off their food,  
reluctance  
to eat**

Has your rabbit's appetite reduced, have they stopped eating completely? Are they refusing to eat their favourite hay and veggies?

**P** **Posture  
changes**

Does your rabbit have a hunched posture? Are they hiding out of sight with limited displays of their natural behaviours?

**If you answer yes to any of the above, STOP, seek advice from your veterinary practice immediately!**
