

Rabbits need a variety of foods in their diets...

Feeding Hay/Grass

High quality feeding hay/grass should make up 85-90% of a rabbit's diet; this is essential for digestive, dental and behavioural health

Nature Snacks

Nature snacks and treats such as dried herbs can be fed to encourage foraging or to encourage bonding

Rabbits also need a friend to share with!

Nutritious Nuggets

A small amount of nutritious nuggets should be fed to provide extra vitamins and nutrients

Fresh Greens

A small handful of fresh greens can be fed daily to provide variety
